**ROYAL GOVERNMENT OF BHUTAN**

## **FREQUENCY CHANNEL PLAN FOR FIXED POINT TO POINT RADIO SYSTEM IN MICROWAVE BAND**

**NOVEMBER, 2019**

## **FOREWORD**

In accordance with the Information, Communications and Media Act of Bhutan 2018 and the National Radio Rules and Regulations, the “**Frequency Channel Plan for Fixed Point to Point Radio System in Microwave band**” is hereby adopted as of 15<sup>th</sup> November, 2019.

A handwritten signature in blue ink, appearing to read "P. J. S. M." followed by a stylized surname.

(Chairperson )

**BHUTAN INFOCOMM AND MEDIA AUTHORITY**

## **1. BACKGROUND**

With the drastic increase in domestic communication traffic, there is need to enhance the backhaul transmission capacity resulting into rise in demand for band above 10 GHz. This band supports short hop high density application for mobile network backbones and urban network application.

The frequency channel plan for point to point radiocommunication in microwave band is to strengthen the proper management and enhance the effective and efficient planning and usage of microwave spectrum by the Service provider. This frequency channel plan prepared as per the ITU-R recommendations and ESTI standards.

## **2. LEGAL BASIS**

This frequency channel plan is prepared as per:

1. Section 165 of the Information, Communications and Media Act of Bhutan 2018, which requires Authority , from time to time, prepare a Frequency Band Plan in respect of any part of radio frequency spectrum;
2. Subsection 1.2(a) of the chapter I of the National Radio Rules which requires the Authority to prepare frequency band plans.

### **3. ALLOCATIONS, BAND PLANNING AND CHANNEL ARRANGEMENTS**

#### **3.1 Frequency Allocation**

The frequency allocations for fixed service are specified in the frequency allocation table of Bhutan which is as per the ITU Radio Regulations fixed service allocations for Region 3. However, all of the specified fixed service allocated in microwave band has also been allocated to other services (Mobile, Fixed satellite and etc). Therefore, in order to assign suitable band for fixed service it is very important to choose most suitable band fixed service from the long list of band outlined in frequency table of allocation.

Further, fixed services are generally categorised into fixed point to point and fixed point to multi-point. Therefore it is essential to redistribute the frequency band within the two categories of fixed services in most suitable, equitable and efficient manner as per the international norms and standards like ITU-R resolution, recommendation and ETSI standard.

#### **3.2 Channel arrangement planning for point to point radio system in microwave band:**

Fixed service in microwave bands are generally planned to align with well-defined ITU recommendations or other recognised regional standards and to accommodate readily available products. Accordingly, most of the Radio Frequency (RF) Channel Arrangements of Bhutan are closely aligned with the appropriate ITU-R recommendations.

The following table shows the channel arrangement plan for fixed point to point radio system where channel planning is framed based on the ITU-R recommendation on fixed services. The detail information of channel arrangement plan point to point radio system can be retrieved from the appendix 1 of this document.

**Table 1 : Channel arrangement plan in microwave band for fixed point to point radio system.**

Sl. No	Frequency band	Frequency range	Channel arrangement plan	Remarks
1	Lower 6 GHz (5925-6425 MHz)	5925-6425 MHz	Recommendation ITU-R F383-9	Recommended for Radio-frequency channel arrangements for medium- and high-capacity digital fixed wireless systems
2	Upper 6 GHz ( 6 425-7 125 MHz )	6425-7125 MHz	Recommendation ITU-R F.384-11	Recommended for Radio-frequency channel arrangements for medium- and high-capacity digital fixed wireless systems
3	7 GHz (7 110-7 900 MHz)	7125-7425 MHz	Recommendation ITU-R F.385-10	Recommended for RF channel arrangement for FWSs at supporting data rates up to 155 Mbit/s, including synchronous digital hierarchy bit rates,
		7425-7725 MHz	Recommendation ITU-R F.385-10	
4	8 GHz( 7725-8500 MHz)	7725 -8275 MHz	Recommendation ITU-R F.386-9 (annexure1)	RF channel arrangements for the transmission of various digital signals operating in the 7 725-8 275 MHz band, with 300 MHz duplex spacing, based on multiples of 2.5 MHz bandwidth
		7725- 8275 MHz	Recommendation ITU-R F.386-9(annexure 6)	Recommended for Fixed service with a capacity digital systems up to 140 Mbit/s or synchronous digital hierarchy bit rates operating in the 8 GHz band,
5	13 GHz (12.75-13.25 GHz)	12.75-13.25 GHz	Recommendation ITU-R F.497-7	This Recommendation presents an RF arrangement with a channel separation of 28 MHz in the frequency range 12.75-13.25 GHz. Methodologies are provided for subdividing the main

				28 MHz wide channels into smaller channels of 14, 7 and 3.5 MHz,
6	15 GHz(14.5 - 15.35 GHz)	14.5- 15.35GHz 14.4-15.35 GHz	Recommendation ITU-R F.636-4	This Recommendation presents RF channel arrangements with separations of 3.5, 7, 14, 28 and 56 MHz.
7	18 GHz(17.7-19.7 GHz)	17.7-19.7 GHz	Recommendation ITU-R F.595-10	The channel spacing recommended in the main text are 220, 110, 55 and 27.5 MHz for co-channel arrangements as well as interleaved arrangements for 220 and 110 MHz spacing.
8	22 GHz (21.2-23.6 GHz)	21.2-23.6 GHz	Recommendation ITU-R F.637-4	The main text of this Recommendation presents RF channel arrangements based on the homogeneous patterns with channel separations of 2.5 and 3.5 MHz.
9	32 GHz (31.8 -33.4 GHz)	31.8 -33.4 GHz	Recommendation ITU-R F.1520-3 (Annexure 1).	The RF channels for separations of 3.5 MHz, 7 MHz, 14 MHz, 28 MHz, 56 MHz and 112 MHz shall be derived as follows: fr be the reference frequency of 32599 frequency duplex spacing = 812 MHz.
10	38 GHz (37-39.5 GHz)	37- 39.5 GHz	Recommendation ITU-R F.749-3 (Annexure 1).	The radio-frequency channel arrangement for carrier spacing of 112 MHz, 56 MHz, 28 MHz, 14 MHz, 7 MHz and 3.5 MHz in band of 37.0 - 39.5 GHz.
11	42 GHz ( 40.5 -43.5 GHz)	40.5-43.5 GHz	Recommendation ITU-R F.2005-4 (Annexure 1).	This Recommendation provides radio-frequency channel arrangements for point-to-point (P-P) fixed wireless systems operating in the 42 GHz (40.5 to 43.5 GHz)

				band, which may be used for high, medium and low capacity systems. The preferred radio-frequency channel arrangements are based on multiples of basic channels of 7 MHz width merged to form higher channel widths up to 112 MHz.
12	52 GHz (51.4-52.6 GHz)	51.4-52.6 GHz	Recommendation ITU-R F.1496-1 annexure 1	This Recommendation specifies radio-frequency channel arrangements for fixed wireless systems with channel separations of 3.5, 7, 14, 28 and 56 MHz in the band 51.4-52.6 GHz, which has been identified for use for high density applications in the fixed service (HDFS).
13	V-band (57-66 GHz)	55- 66 GHz	Recommendation ITU-R F.2006 (Annexure 1 and annexure 3).	This Recommendation specifies radio-frequency channel arrangements for fixed wireless systems (FWS) using TDD (time division duplex) or FDD (frequency division duplex) with channel separations of 3.5, 7, 14, 28, 30, 50 and 56 MHz in the range 55.78-66 GHz.
14	E-band (71-76 GHz and 81-86 GHz)	71-76 GHz and 81-86 GHz	Recommendation ITU-R F.2006 (Annexure 1).	This Recommendation provides radio-frequency channel and block arrangements for fixed wireless systems (FWS) operating in the 71-76/81-86 GHz range, which may be used for broadband applications and other high-speed networks.

#### **4. LICENSING**

The Fixed service for point to point radiocommunication in microwave band is generally licensed under radiocommunication Apparatus License under section 2.5 of the National Radio Rules of Bhutan, 2011. Fixed point to point services are also subject to spectrum term and condition prescribed by the Authority.

The frequency being scarce public resource, the use of relevant carrier frequency or frequency block by the company/organization should be subject to the payment of the License fee (application fee and Spectrum access fee) and spectrum utilization fee (SUF) annually.

#### **5. TRANSMIT POWER LIMIT**

The transmit power level in fixed service for point to point radiocommunication shall be as per the International Radio Regulation 21.5(3) and ITU-R Recommendation SF.406 “*Maximum Equivalent Isotropic Radiated Power of Radio-Relay System Transmitters Operating in the Frequency Bands Shared with the Fixed-satellite Service*”. The power of a transmitter in the fixed service shall not exceed:

- 43 dBm (20 Watts) in the bands between 1 GHz and 10 GHz; and,
- 40 dBm (10 Watts) in the frequency bands above 10 GHz, except in the band of 18.6-18.8 GHz where the limit is +27 dBm (0.5 Watts) in accordance with International Radio Regulation 21.5A.
- in order to protect stations in the Earth exploration-satellite service (passive), the maximum power density delivered by the transmitter to the antenna of a fixed service in band of 55.78-56.26 GHz is limited to -26 dB(W/MHz) which is as per the ITU Radio Regulations.

## **6. FREQUENCY COORDINATION**

Most of the spectrum allocations utilised by microwave fixed services are shared with various other (fixed and non-fixed) types of radiocommunication service. Therefore, it is necessary to consider the frequency coordination mainly with following radiocommunication services:

- Coordination between fixed service with Earth stations;
- Geostationary satellite orbit avoidance: Fixed services operating in the same frequency band/s as satellites in the geostationary orbit are required to ensure that (fixed service); emissions do not cause harmful interference to sensitive satellite receivers;
- Coordination between fixed microwave point to point radio systems with fixed microwave point to multipoint radio system;
- Coordination between fixed services with mobile services.

## Appendix 1:

### **Channel arrangement in fixed point to point radio system in microwave band.**

Note:

$F_0$ = Centre frequency

$F$ = Frequency in MHz for channel in lower half band.

$F'$ =Frequency in MHz for channel in upper half band.

n= channel number.

Frequency band	RF channel arrangements			Duplex (TX/RX) spacing (MHz)	Channel spacing(MHz)	Remarks
	CH#	F (MHz)	F' (MHz)			
40.5 -43.5GHz	1	40606	42106	1500	112	<b>Recommendation ITU-R F.2005-4 (Annexure 1).</b> This Recommendation provides radio-frequency channel arrangements for point-to-point (P-P) fixed wireless systems operating in the 42 GHz (40.5 to 43.5 GHz) band, which may be used for high, medium and low capacity systems. The preferred radio-frequency channel arrangements are based on multiples of basic channels of 7 MHz width merged to form higher channel widths up to 112 MHz.

	25	41922	43422			

preferred radio-frequency channel arrangements are based on multiples of basic channels of 7 MHz width merged to form higher channel widths up to 112 MHz.  
For systems with a carrier spacing of 28 MHz:  
lower half of band:  
 $F_n = F_0 - 1464 + 28n$  MHz  
upper half of band:  
 $F'_n = F_0 + 36 + 28n$  MHz  
where:  $n = 1, 2, 3, \dots, 50$   
 $F_0 = 42,000$
