## 1. Background

The Authority collects the monthly system generated Mobile Operating Support System (OSS) report from the Telecom Operators and does reviews on the average Mobile Quality of Service (QoS). Based on the system generated Mobile OSS reports, the Authority decides the locations of physical verification or a drive test and carries out the Mobile QoS drive test to monitor and report the QoS regularly. The Mobile OSS report contains the mobile QoS for both voice and data services which are based on and measured through the various parameters of key performance indicators (KPI) of Mobile services of the 20 dzongkhags.

These OSS reports contain both operator's averaged Operation Support system (OSS) reports for the month of July 2022.

## 2. Findings

The results and findings of OSS system generated reports submitted by both the telecom operators are mentioned below:

### **3. Analysis**

- a. For both TICL and BTL, all the average parameters for all Dzongkhags are within the set benchmark except for 3G download throughput of Samtse and Tsirang for TICL.
- b. Meanwhile, wherever the 3G sites are co-located with the 4G sites, the QoS issues of 3G are taken care of by the presence of 4G services.
